[Fighting at the Legal Boundaries](#) Kenneth Watkin OMM, CD, QC 2016-05-03 The international law governing armed conflict is at a crossroads, as the formal framework of laws designed to control the exercise of self-defense and conduct of inter-state conflict finds itself confronted with violent 21st Century disputes of a very different character. Military practitioners who seek to stay within the bounds of international law often find themselves applying bodies of law-IHRL, IHL, ICL-in an exclusionary fashion, and adherence to those boundaries can lead to a formal and often rigid application of the law that does not adequately address contemporary security challenges. Fighting at the Legal Boundaries offers a holistic approach towards the application of the various constitutive parts of international law. The author focuses on the interaction between the applicable bodies of law by exploring whether their boundaries are improperly drawn, or are being interpreted in too rigid a fashion. Emphasis is placed on the disconnect that can occur between theory and practice regarding how these legal regimes are applied and interact with one another. Through a number of case studies, Fighting at the Legal Boundaries explores how the threat posed by insurgents, terrorists, and transnational criminal gangs often occurs not only at the point where these bodies of law interact, but also in situations where there is significant overlap. In this regard, the exercise of the longstanding right of States to defend nationals, including the conduct of operations such as hostage rescue, can involve the application of human rights based law enforcement norms to counter threats transcending the conflict spectrum. This book has five parts: Part I sets out the security, legal, and operational challenges of contemporary conflict. Part II focuses on the interaction between the jus ad bellum, humanitarian law and human rights, including an analysis of the historical influences that shaped their application as separate bodies of law. Emphasis is placed on the influence the proper authority principle has had in the human rights based approach being favored when dealing with "criminal" non-State actors during both international and non-international armed conflict. Part III analyzes the threats of insurgency and terrorism, and the state response. This includes exploring their link to criminal activity and the phenomenon of transnational criminal organizations. Part IV addresses the conduct of operations against non-State actors that span the conflict spectrum from inter-state warfare to international law enforcement. Lastly, Part V looks at the way ahead and discusses the approaches that can be applied to address the evolving, diverse and unique security threats facing the international community.

**International Law for Seagoing Officers** Craig Allen 2014-05-15 For those who operate on, under and over the sea, international law can sometimes be as complex as it is important. Written by the same former seagoing officer and maritime law professional who authored the current edition of Farwell's Rules of the Nautical Road, this book was designed to bring clarity and context to international law for the seagoing professional. Following an introduction to public international law and a short history of the law of the sea, the book describes the rules that apply in ports and in the adjacent maritime zones, including the territorial sea, exclusive economic zone, archipelagic waters and the high seas. A highlight of the book are the chapters that focus on the subjects of greatest interest to the seagoing professional, including military and intelligence activities in the maritime domain, maritime law enforcement activities and the use of force at sea. The appendices include the text of the 1982 UN Convention on the Law of the Sea. Whether an academy cadet, a midshipman, a seasoned commanding officer, or a master mariner, readers of this thorough and timely book will be rewarded with a far greater understanding of the international laws that govern ships and mariners at sea.

[Handbook of Recycling](#) Ernst Worrell 2014-04-28 Winner of the International Solid Waste Association's 2014 Publication Award, Handbook of Recycling is an authoritative review of the current state-of-the-art of

recycling, reuse and reclamation processes commonly implemented today and how they interact with one another. The book addresses several material flows, including iron, steel, aluminum and other metals, pulp and paper, plastics, glass, construction materials, industrial by-products, and more. It also details various recycling technologies as well as recovery and collection techniques. To completely round out the picture of recycling, the book considers policy and economic implications, including the impact of recycling on energy use, sustainable development, and the environment. With contemporary recycling literature scattered across disparate, unconnected articles, this book is a crucial aid to students and researchers in a range of disciplines, from materials and environmental science to public policy studies. Portrays recent and emerging technologies in metal recycling, by-product utilization and management of post-consumer waste Uses life cycle analysis to show how to reclaim valuable resources from mineral and metallurgical wastes Uses examples from current professional and industrial practice, with policy and economic implications

**Lean Six Sigma for Small and Medium Sized Enterprises** Jiju Antony 2017-12-19 It is no secret that Lean Six Sigma (LSS) is not as popular with small and medium-sized enterprises (SMEs) as it is with larger ones. However, many SMEs are suppliers to larger entities who are pushing for superior quality and world-class process efficiencies from suppliers. Lean Six Sigma for Small and Medium Sized Enterprises: A Practical Guide provides a roadmap for the successful implementation and deployment of LSS in SMEs. It includes five real-world case studies that demonstrate how LSS tools have been successfully integrated into LSS methodology. Simplifying the terminology and methodology of LSS, this book makes the implementation process accessible. Supplies a general introduction to continuous improvement initiatives in SMEs Identifies the key phases in the introduction and development of LSS initiatives within an SME Details the most powerful LSS tools and techniques that can be used in an SME environment Provides tips on how to make the project selection process more successful This book covers the fundamental challenges and common pitfalls that can be avoided with successful introduction and deployment of LSS in the context of SMEs.

Systematically guiding you through the application of the Six Sigma methodology for problem solving, the book devotes separate chapters to the most appropriate tools and techniques that can be useful in each stage of the methodology. Keeping the required math and statistics to a minimum, this practical guide will help you to deploy LSS as your prime methodology for achieving and sustaining world-class efficiency and effectiveness of critical business processes.

**Gardens and Human Agency in the Anthropocene** Maria Paula Diogo 2019-05-09 This volume discusses gardens as designed landscapes of mediation between nature and culture, embodying different levels of human control over wilderness, defining specific rules for this confrontation and staging different forms of human dominance. The contributing authors focus on ways of rethinking the garden and its role in contemporary society, using it as a crossover platform between nature, science and technology. Drawing upon their diverse fields of research, including History of Science and Technology, Environmental Studies, Gardens and Landscape Studies, Urban Studies, and Visual and Artistic Studies, the authors unveil various entanglements woven in the past between nature and culture, and probe the potential of alternative epistemologies to escape the predicament of fatalistic dystopias that often revolve around the Anthropocene debate. This book will be of great interest to those studying environmental and landscape history, the history of science and technology, historical geography, and the environmental humanities.
