Automotive Production Systems and Standardisation

Constanze Clarke

2005-04-13 In January

2000, Mercedes-Benz started to implement the Mercedes-Benz Production System (MPS) throughout its world-wide passenger car plants. This event is exemplary of a trend within the automotive industry: the creation and introduction of company-specific standardised production systems. It gradually emerged with the introduction of the Chrysler Operating System (COS) in the mid-1990s and represents a distinct step in the process towards implementing the universal principles of lean thinking as propagated by the MIT-study. For the academic field of industrial sociology and labour policy, the emergence of this trend seems to mark

a new stage in the evolution of the debate about production systems in the automotive industry (Jürgens 2002:2), particularly as it seems to undermine the stand of the critics of the one-best way model (Boyer and Freyssenet 1995). The introduction of company-level standardised production systems marks the starting point of the present study. At the core of it is a case study about the Mercedes-Benz Production System (MPS).

The Autocar 1975

Mercedes-Benz Paweł Huelle 2005 In the Polish city of Gdansk, our narrator Pawel tells of the driving lessons he took in the early 1990s, shortly after the end of communism. As he struggles with the tiny Fiat's gearbox, causing chaos while stalled at a crossroads, Pawel entertains his instructor Miss Ciwle with stories of his grandparents before the war and of his father in the 1970s, centered on their ownership of

Mercedes-Benz cars - the outings, the races, the crashes and the inevitable repairs. Based on fact and illustrated with personal photographs, these tales contrast the golden era of Poland's pre-war independence with the dismal communist years, and with the uncertain new chapter in the country's history that had only just begun when Pawel was learning to drive. Huelle creates a portrait of three generations amid life-changing historical events.
